
High Amperage Circuit Protectors

Amps	WRS Part Number
50 Amp	CBW1080
80 Amp	CBW1081
100 Amp	CBW1078
150 Amp	CBW1079

Designed and built to operate in harsh environments, **Wired Rite's** "Butterfly" breakers provide reliable, long-term protection for electrical circuits.

Commonly installed between the battery (at the battery location) and a switch panel or other device, our watertight "Butterfly" breaker will provide manual reset circuit protection to protect the battery wire from overloads.

Our circuit protector features a manual disconnect function that will allow you to disable electrical apparatus by activating a release on the breaker body. When depressed or tripped, an extended reset lever provides positive visible verification of an open circuit.

Single pole only, the circuit protectors are available in 50, 80, 100 and 150 amp models. Operating temperature range is -25° to +180° F.
